00:00

In the next few minutes, I'm going to show you how busy corporate professionals, just like you, are building their own AI business on the side, making 10, 20, even 50K a month without leaving their corporate job, without learning technical skills, and working just a few hours a week. These are real businesses paying three, five, and even 10K a month to put AI in their company. Every single month, I'm talking about monthly recurring revenue.

00:28

I'll also warn you about the three traps that catch almost everyone who tries to escape the corporate world, traps that cost me personally 10 years and a fortune. Avoid these three, and you're ahead of 99 % of the people watching this. My name is Amin. I'm an X McKinsey consultant, Forbes 30 on the 30 and the founder of Unscale. And if you don't have time, here is the short version. Don't leave your corporate job. Don't start an AI agency.

00:55

I don't care about what the gurus tell you. Apply to become a partner at Unscale, and if you are accepted, my marketing team will get you your first prospects. My sales team will get on the calls with you and help you close them, and my engineering team will deliver every single AI implementation that you saw. And you know why those clients will say yes to you? Because you're not walking in as a stranger, building a name from scratch.

01:22

You're walking, carrying our name, our brand, our social proof, the hundreds of clients that we've worked with in the past. So all you have to do is be the person that clients trust, own that relationship and let us run the machine behind you.

01:37 [SIDE]

Just like Tony here, who was a product manager, Michael who was a consultant, or Josh, a senior executive, none of them are technical, and all of them are running real AI businesses today. And every reaction that you saw in the beginning of this video, that was a real business saying yes to an unscaled partner who was sitting exactly where you are right now not a long time ago.

01:58

So if you are already thinking, this is exactly what I've been looking for then don't wait for me to finish. The application is right below. It takes two minutes, fill it out, and I promise I will review it myself. But if you're like me, and you want the full picture first, how it works, and who's behind it, then stick with me for a few minutes, and I'll show you exactly how I got here. So here is my story.

02:21 [SIDE]

I started my career at McKinsey, first in Boston, then in Dubai, and I was living really the life that I thought that I wanted. First -class travel, five -star hotels, the salary everybody envied, or so I thought, because on the outside it looked like I was winning, but on the inside I was dying.

02:41

I had given up my freedom. I was spending my days on things that I didn't care about to fund a life that I did not even want. And when you live that far out of alignment with who you are, your body starts to tell you, and for me it was that pit in my stomach every Sunday nights.

02:56 [SIDE]

You know that one pit, maybe for you it's coming home, drained, you don't have energy for the people that you love, or is that voice at 2 a .m. in the morning asking, is this really it? Is this what life is all about? For me I kept ignoring that voice, and I kept going.

03:12

Until one day mid -projects, I literally collapsed. I woke up, I found myself in the hospital. I had completely burned out, and I spent two weeks on a hospital bed. And while I was lying in that bed, you know what the firm did? They simply replaced me, just like that. Like I was never there. And that's when it hit me. The truth that corporate America spends your whole career making you forget, you are replaceable. You are expandable.

03:42

To them you're just a number. No matter how many nights or weekends you give them, the day you break, they just swap you out without a second thought.

03:51 [SIDE]

And now the crazy thing is that they're not even waiting for you to break. AI has handed them the perfect excuse. You've seen the layoffs, Amazon, 30 ,000 corporate jobs gone in the last six months. Metta, 8 ,000 jobs, Oracle, 20 ,000 jobs. These are not even failing companies. They're the most profitable companies on the face of the earth and they're cutting the people who built them.

04:14

And if it hasn't come for you yet, believe me. It will. For me, I did not need the AI headlines to leave. I had already learned that truth, lying in the hospital bed. I had to leave.

04:26 [SIDE]

But I couldn't simply walk away from the salary, the security, the status and prestige, and I'm guessing a lot of you are trapped in the same situation. I kept telling myself soon. Soon I'll do it. And then my first son, Ryan, was born. And I remember holding him for the first time, with his tiny hand gripping my finger.

04:45

I thought to my own father who worked himself to the bone, whom I barely saw when I was growing up. And right there, holding my son, I decided that I'm going to break that cycle. Because my son is going to learn what life looks like by watching me. And I refused to teach him to keep saying soon until soon becomes never. So I decided to simply quit my six -figures career. I left. I jumped. And in the beginning, I felt unstoppable.

05:12 [SIDE]

I bought into the myth, the Zuckerberg fairytale, drop everything, bet it all, and the world will reward you. But believe me, that was the most expensive and stupidest mistake I've ever made. I walked away from a six -figure salary at 27 with a newborn at home, with no clients, no prospects, just a pitch deck and my savings.

05:33

I could not pay myself for a year, then after begging hundreds of investors, I ended up raising \$2 million from investors that invested in Dropbox and Airbnb. I made it to the Forbes 30 on the 30 list, right next to Cardi LaVine, and I thought I made it, then COVID hit, and I lost almost everything. And I need you to hear it from me, what nobody tells you about the startup dream, because it might save you years of your life.

06:00 [SIDE]

When you raise venture capital, you don't escape the system. You're just signing a deal with the devil, because for a VC, you're one bet, you're one bet in a portfolio of hundreds of companies. They can afford 99 failures, but you cannot afford a single one. So it's grow at all costs, burn all the cash, chase the next round, work more hours than you ever did in corporate.

06:25

And it's your savings, your health, and your family on the line, not theirs. So I had not escaped anything. I just swapped being a corporate slave and became a slave to the venture capitalists. So here's my first warning to you. If you're sitting here thinking about the way out, that the way out is to create your job and chase a startup, please hear me out. Don't. There's a smarter way in 2026, and I'll show you what it is in a minute.

06:50

For me, back then, I knew nothing of this. All I knew was I was almost broke, I had a family defeat, and I needed a way out and fast.

07:00 [SIDE]

So I chased every get-rich-quick scheme on the internet. Make money online, dropshipping, coaching, e-commerce, SMMA, you name it, I tried it. And that's exactly when I hit rock bottom. I was scammed over and over by these fake gurus you see running yesterday. Tens of thousands of dollars invested in courses, coaching programs, mentorships, all gone.

07:23

Which brings me to my second warning. If a guru is promising you that you'll get reached next month with his secret system, please run. Those courses are the ones that buy their Lamborghinis. Not your freedom. To be honest with you, there were nights where I thought about giving up. But I had made my son a promise, so I kept going. Until three years ago, something incredible happened.

07:48 [SIDE]

Most people did not understand it, did not notice it. They just saw a toy, a chatbot, writing poems, and doing homework. But the second I got my hands on it, I knew this was the one thing I was waiting for my entire life. Three years ago, chat GPT was born. And for the first time in history, a single person could do the work of an entire team, the research, the writing, the analysis, the outreach, at a level and at a speed no human could match.

08:17

The only question was, where do I point it? And I chose the single problem every business on Earth shares, which is getting more clients. Because bring a business more clients and believe me, you will never starve a day in your life. So I unlocked myself in and I built a system that used AI to research every single prospect and write cold outreach emails so personal that it felt handwritten.

08:44 [SIDE]

I sent out a first batch of those emails and boom, look at these replies and how they were pouring in. Real interests. That's when I signed my first client, Spiralized, who were paying me 10K a month to fill their pipeline with leads. Then another, and another, and the business started growing.

09:02

But this time, it did not become another prison. Because this time, AI was doing the work. They were running around the clock delivering for my clients whether I was at my desk at home or playing with my son. This time, my revenue climbed, but my hours did not. My whole life, the world had screamed one word to me. You have to scale, you have to grow bigger, you have to hire more. But the secret was actually doing the opposite.

09:27

The secret was unscaling.

09:29 [SIDE]

So instead of hiring people to grow, you let AI do the work. Agentic AI systems, real digital employees that actually get things done. They never sleep, they never complain, they never take a sick day, and they never quit. And that is the art of unscaling.

09:46

Now, here is the part that I really want you to hear. The same guy who, a year earlier, was broke and ready to quit. I now pick up my son from school every single day. I drop him off every single day. I'm there for every dinner. I run the company from a laptop from whatever I want. And that promise I made to my son, I get to keep it. And I want and I am the father to him that I always wished mine could have been for me.

10:13 [SIDE]

And what this actually bought me, the time, presence, with the people that I love. And this is far richer than any bank account could provide you. That's exactly why I'd love for you to live that. And I mean it because I know what that cage feels like from the inside. And once you're out, you can't just watch people stay stuck.

10:33

So I made it my mission today with unscaling to give this to people sitting exactly where I was. So the question really becomes, how can we do it? What really stands between you and your own AI business? An AI business that pays you every single month, only on a few hours per week. Well, every guru online will give you their answer. They're going to ask you to start an AI agency by their course and figure it out. I'm telling you the exact opposite.

11:00

Don't. Because alone, you will slam straight into the same three walls that nearly destroyed me.

11:07 [SIDE]

Number one, credibility. You are a nobody today. Why would any business trust you? Number two, clients. You don't know how to do outreach, how to run ads, how to get meetings on your calendar. So how are you going to grow? And then number three, the delivery. Let's assume you get clients. You don't know how to build AI systems and automations. So even if you landed the clients, how would you do the work?

11:30

Those three walls took me years and a fortune to crack. So I built the one thing I wish someone had handed me when I was broken desperate. Not another course, the shortcut that I never had. Instead of starting an agency alone, you walk straight into the firm that I already built. Remember those three walls? What should happens to them? For the first one, the client wall.

11:52 [SIDE]

My marketing team will run the same AI outreach systems that landed my own clients, except now they run them for you. You don't cold call, you don't chase strangers, qualified business owners, land on your calendar, asking about AI. And when they show up, you're not selling alone. My sales team is on those calls with you, helping you close those first deals together until you can run them in your sleep.

12:16

And when you sign those clients, my engineers take over. Every system, every workflow, every result. You never have to write a single line of code. Your job is to simply be the person that your client trusts. Own that relationship and we run the machine behind you.

12:34 [SIDE]

And that credibility wall, the one that I spent years breaking through alone, you skip it entirely because you're not walking in as some brand new agency nobody heard of. You're a partner of our scale. Our brand, hundreds of clients results, the X McKinsey, the Forbes track record, all of that behind your name from day one. The systems, the tools, the training, the team, all of it from day one.

12:59

So you might be wondering, what exactly are your clients paying for? Let me make it real for you. Take one of our own examples.

13:06 [SIDE]

SizeMick is a recruitment company and their growth depended on booking meetings. It was expensive through salespeople and it was extremely inconsistent. So we installed them a growth machine that researches every prospect in the market, writes personalized outreach that feels handwritten. And it runs every single day whether anyone is at the desk or not. We got them 44 meetings booked and a reply rate most salespeople can only dream of.

13:33

and that's exactly what your clients buy, a digital employee, fixing a problem that was causing them multiples of what they pay for. You're not asking a business owner to gamble. You're handing them a number that's obviously smaller than what they're already bleeding out at his company. And here is how your week actually would look like as an unscaled partner.

13:54 [SIDE]

You take the calls that my marketing team books you. The sales team is right beside you. You listen, you understand their business. You agree on what to build. And my engineers build it for you. The only thing you have to do is just own the relationship. That is the job. And it takes a few hours per week.

14:11

And here's the best part. They don't pay once. Every single month that machine runs and they keep paying. Remember the first thing that I told you in this video, recurring revenue. And the math here is really simple.

14:24 [SIDE]

Those businesses pay three up to 10k per month for us to run AI inside the company. So do the math for me. Just three clients at 4k a month. That is 12k in recurring revenue. On the side of the job you already have. A handful more and you're anywhere between 10 and 50k a month. Still on a few hours a week. And then you can quit your job and focus on this AI business.

14:48

these are real numbers from real partners. Look at these retainers. Look at these contract signs for 60k, 10k per month, 5k per month. These are real results, real contracts, and real payments. But let me be direct with you. This is not for everyone. Because what happens the day you're accepted into the unskilled partnership, I'm going to be tying my reputation to your name.

15:12 [SIDE]

So every client you sign, you sign as an unskilled business partner. That is 10 years of my work, my brand, my track record, and my credibility that is standing behind you every time you walk into a room. So before I hand you that, I have to do my due diligence on you. And I do it personally. That's why we only take 10 partners a quarter. And these are our requirements.

15:35

Number one, the background. Ideally, you come from a real career. You're a director, a consultant, an operator. Not necessarily with pedigree, but genuinely hungry, the kind that outworks everyone.

15:47 [SIDE]

Number two, the capital investment. There is serious investments of 10 to 20k to start. After that, we only make money when you do. So if that's a number, you'd have the stretch or to borrow for, then this is not the right opportunity for you. Number three, you have to be coachable. I'm putting my brand and my team behind you. So you do the work, you follow the playbook, and you will land exactly where we want you, which is winning all those recurring contracts.

16:14

And I read every single application myself, and I even interview our partners myself. Not my CLS team. Now, here's why I can put my whole team on your business. The reason why is because we only make money when you do. So if you don't win, we don't win. It's that simple. And that's why we're extremely selective about the people that we bring in. And I'll put this in writing. You're in with us for a full year.

16:38 [SIDE]

If you do what we ask of you, finish your onboarding, show up to the calls, run the ads the way we tell you, and you're not getting results. We don't just walk away. We keep working with you for free until you do. And it is in the contract. We only win when you do.

16:55

So right now, you have a choice. The same choice that I had ten years ago. You can close this video and go back back to that pit in your stomach on Sunday night.

17:07 [SIDE]

Back to building someone else's dream and hoping that the next round of layoffs will skip your name. That is the blue pill. And honestly, for most people, that's a fine life. But you're not most people. And you've seen how that story ends. You're just a number to them and you know it.

17:25

So the other alternative for you is you apply. We have a conversation, you and I. And if it's a fit, you start building something that's actually yours with a real firm behind you. And everything that cost me ten years, a burnout and a fortune to learn. We're only taking ten partners this quarter. And I'm putting my name and a guarantee in writing. And I will read your application myself. And one last thing I told myself.

17:53

Soon for years. And it took me a hospital bed. And my son's tiny hand to finally move. Please don't wait for your version of that. Because someday, and that day will come, you will run out of soon. And then you'll run out of day. And all that's left is looking back wondering what if. Right now, the door is open. Whether you walk through it, that is entirely up to you. I'll see you on the other side.
